While it's nice to have, any lack of cloud documents collaboration is worth it if you already own the device itself. Some people might easily be able to justify not owning a standalone desktop or laptop and using the iPad Pro and Apple Pencil instead. As far as color accuracy, the Apple Pencil allows you to select a color by *noticing* it. As with other apps that rely on the Apple Pencil, the selection will be smooth without strokes. Once you get it right, you can erase by tapping the canvas and it will be as good as the original. If you do want to erase, just use your finger. The Pencil is an **all-in-one** tool with the ability to use it like a keyboard and use it like a mouse, depending on how the application needs it. That even includes the ability to use it like a scroll bar. Use the Pencil to click. Use it with your fingertip to drag. Or your finger to gesture. The Apple Pencil will be \$99 in December but the prices are often discounted. You can also get an iPad Pro with the Pencil for \$329, which is still a pretty steep price, especially when you consider the cost of the Apple Pencil itself. Still, it could be the right solution for some people, especially if you can identify it as a temporary purchase. **A:** Here's a fun way to turn Photoshop Sketch into something machine-gunning. Just hold the Airshot button. **B:** The Airshot button can switch to brush select mode as well.

It is recommended that only use these features sparingly and read the warning messages that appear when the features are used. If you make use of any of the experimental features that are incompatible with the stable version of

Photoshop you may receive a warning message upon your next update. It is a good idea to make use of the latest supported version of Photoshop prior to experimentation.
